## **DETAILED ACTION**

### ***Claim Objections***

A single claim is not numbered, MPEP 608.01(j).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The claim is rejected under 35 U.S.C. 103(a) as being unpatentable over Hosaka (JP 58-134655 A). The publication discloses first rotatable member with heater 9a, second rotatable member with heater 9b, with phase control so as to avoid overlapping of current to first and second heaters, figure 2a and 2b, and either inherently has temperature detectors for the heaters or else it would have been obvious to one of ordinary skill in the art at the time the invention was made to use temperature detectors to accurately control the temperature for fusing.

### ***Double Patenting***

The claim is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over the claim of U.S. Patent No. 6,654,572 B2. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claim is broader and later filed.
